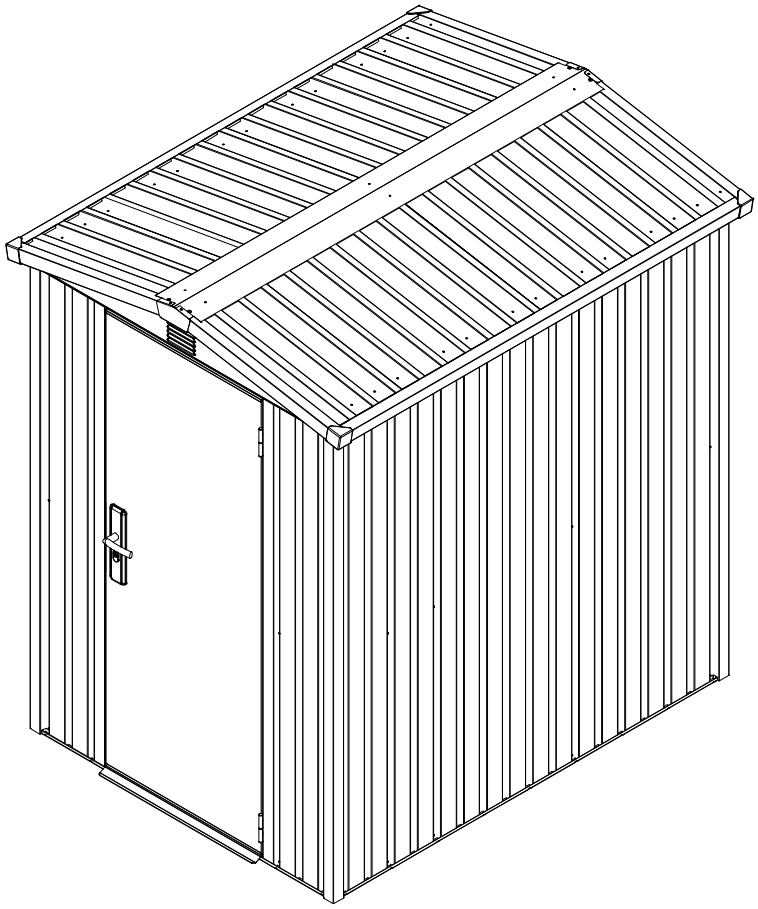
Metal Garden Shed

OWNER'S MANUAL

Instructions for Assembly



PREMIUM WOODGRAIN

5FT W * 6FT L

Requires two people and takes at least 1-1.5 hours for installation. Ridge Reinforced Walls

Built in Vents

BEFORE YOU START

Owner's Manual

Prior to installation, it is important that you contact your local government authority to determine if building approval is required. Study and understand this owner's manual. In this document, you will find important and helpful information that will make your construction easier and more enjoyable.

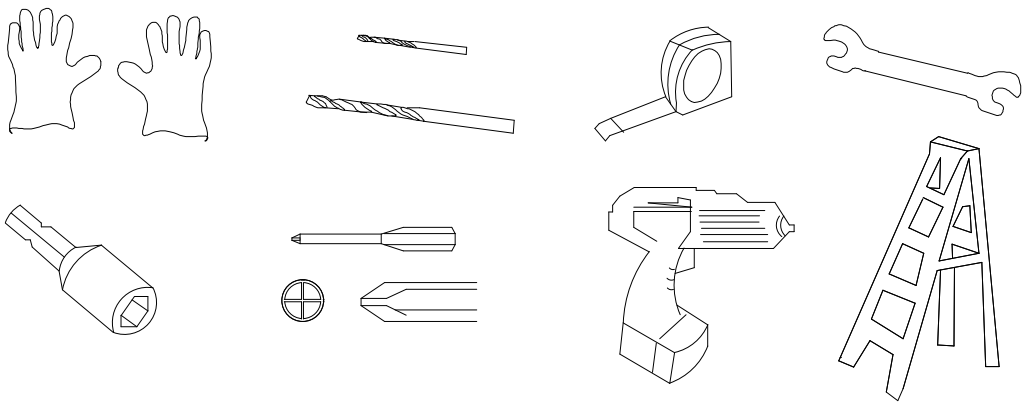
Assembly instructions

Instructions are supplied in this manual and they contain all appropriate information for your to help you correctly assemble your shed. Review all instructions before you begin. During assembly, follow the step sequence carefully, do not jump ahead.

Parts

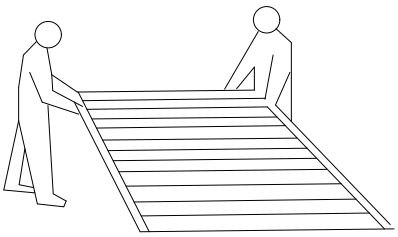
Upon opening the boxes, separate all the contents by their part number while reviewing parts list. Check off that you have all the parts that you require for assembly. Familiarize yourself with the hardware and fasteners for easier use during construction. These are packaged within the carton. Note that extra fasteners have been supplied for your convenience.

TOOLS THAT MAY HELP WITH ASSEMBLY



Use heavy duty gloves when handling steel sheets and flashing

Weather Warnings



Watch the weather:

Choose a suitable day to construct your shed on. Ideally, the shed should be dry and calm.

DO NOT attempt to assemble your shed in windy weather, as it can lead to damage to your person or property. Be careful of wet or muddy ground and take standard safety precautions where necessary.

Teamwork:

Two or more able-bodied people must work together to assemble this shed. One person can position parts or panels while the other is able to handle the fasteners and the tools.

PLAN AHEAD

SITE SELECTION

- Avoid overhanging trees as much as possible. Their branches can damage the surface of your shed and the leaves and debris will make regular cleaning necessary.
- Small trees, bushes or fences nearby, but not overhand can be helpful,acting as a wind break.

SITE PREPARATION

The site must be prepared so that the base of the shed is level all round and checking with a spirit level is required. The base MUST be larger than the footprint of the shed. We recommend a foot larger on each dimension; e.g. if you have a 5ft x 6ft shed, your base should be at least 6ft x 7ft.

The base can be constructed of concrete, tarmac, hardcore stone or Sheds Direct Ireland's 'ShedBase'. A damp-proof membrane must be build under your base to reduce condensation formation.

The shed is not designed to be built onto grass / muck directly. Sheds that are built directly onto grass / soil will suffer from heavy condensation, their panels will warp and crack as the soil moves over time and your warranty is void for any shed buit on an unsuitable base.

Sheds must be bolted to the base.

IMPORTANT INFO

Find someone to help you build this shed, do not do it alone. it is much easier - and safer with someone to hold parts, pass tools to ect. Also some steps require two people to lift structures together. This is not very heavy work so would suit most able-bodied people.

Allow plenty of time; rushing often causes errors and the re-doing of incorrect parts. If you have never built a shed before, it can take most of a day to carefully complete the construction.

Have the right tools to hand.

Safety clothing should be worn during construction

We've said it already, but we'll say it again: Lay out the parts and check that all are present before commencing construction. Lay on cloths or plastic sheets if there is any risk of scratching the parts.

Tighten all nuts carefully,being sure not to miss any. Do not over-tighten these.

Check the frame is square and using a spirit level to check that it is upright.

STEP ONE: CHECK OFF ALL THE PARTS
